The East Finland EU Office is a common European Liaison Office for the four regions of East Finland: North-Karelia, South-Savo, North-Savo and Kainuu.

The office concentrates on the policy follow-up and identifying the financial possibilities of EU funded programmes and Community Initiatives as well as partner searching for other European regions and actors. We also provide a rendez-vous point and office facilities for visitors from the regions.

East Finland offers modern infrastructure, the most evolved telecommunications and information technologies in the world and an unpolluted environment. Our numerous research institutes, universities, polytechnics and all the other educational institutes are characterised by their excellence and are engaged in a vivid international discourse. For instance, we have many pioneering enterprises in the field of biotechnology.

East Finland has good resources in the different fields of industry and entrepreneurship is one of our central features. Enterprises and scientific community comprise success stories in growing fields such as telecommunications and other branches of high-tech, food industry, biotechnology, electronics, process control, plastic, design and tourism.
